

Final Project Report

Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report

Date	23 September 2026
Team ID	Individual / To be filled
Project Name	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	As specified across the supplied activity files

1. Introduction

This final report consolidates the supplied SmartBridge project materials for the Global AI Adoption in Education project. The materials cover project planning, data collection, business questions, visualization, dashboard design and Tableau Story design. The project is intended to analyze AI adoption in education across countries, regions and available years using interactive Tableau views.

1.1. Project Overview

Analyze global AI adoption in education and compare countries, regions and years. The project uses structured AI-adoption and education indicators and presents the results through interactive Tableau dashboards and a Story.

1.2. Objectives

- Compare AI adoption across countries and regions.
- Identify higher and lower AI-adoption levels using the selected measure.
- Show how AI adoption changes across available years.
- Explore relationships between AI adoption and selected education indicators.
- Enable interactive comparison using Year, Region and Country filters where available.

2. Project Initialization and Planning Phase

2.1. Define Problem Statement

The project focuses on understanding geographic and time-based differences in AI adoption in education, while also exploring how adoption compares with selected education indicators.

2.2. Project Proposal (Proposed Solution)

Use Tableau to convert the final global AI-in-education dataset into interactive maps, rankings, trends, comparison charts and relationship views. The dashboards and Story allow users to move from a global overview to regional and country-level analysis.

2.3. Initial Project Planning

Phase	Planned Output
Planning	Problem statement, overview and objectives
Data	Data Collection Plan and Raw Data Sources
Visualization	Business questions mapped to Tableau visualizations
Dashboard	Interactive Dashboard 1 and Dashboard 2
Report / Story	Tableau Story and final consolidated report
Performance / Links	Filters, calculations, visualizations and project/demo links

3. Data Collection and Preprocessing Phase

3.1. Data Collection Plan and Raw Data Sources Identified

The supplied Data Collection Plan states that relevant public datasets are used to analyze global AI adoption in education across countries, regions and available years. It calls for recording dataset name, source URL, format, size and access permission. The supplied plan leaves the final dataset URL and size as fields to be filled, so no unsupported values are added.

Source	Description	URL	Format	Size	Access
AI in Education Dataset	Country/region AI adoption and education indicators	Final dataset URL	CSV/Excel	To fill	Public
Additional Dataset	Supporting indicator data, if used.	Final dataset URL	CSV/Excel	To fill	Public/permitted

3.2. Data Quality Report

No separate numerical data-quality report is included in the supplied materials. The visualization report explicitly says that actual values and screenshots should come from the final dataset and Tableau workbook. Therefore, this report does not invent data-quality statistics.

3.3. Data Exploration and Preprocessing

- Use country/region and year fields for geographic and time analysis.
- Use the AI-adoption measure for maps, rankings and trends.
- Use selected education indicators for relationship analysis.
- Apply Year, Region and Country filters where those fields exist.
- Use appropriate aggregation, sorting, grouping and comparison views.

4. Data Visualization

4.1. Framing Business Questions

#	Business Question	Visualization	Data / Fields Used
1	How does AI adoption in education vary across countries or regions?	Filtered map / horizontal bar chart	Country or region; AI adoption measure
2	Which countries or regions show the highest and lowest AI adoption levels?	Sorted horizontal bar chart	Country/region vs. AI adoption score/rate
3	How has AI adoption in education changed over time?	Line chart	Year vs. AI adoption measure
4	Which regions have the greatest number of AI-in-education indicators meeting the selected threshold?	Bar chart	Region vs. count/percentage meeting threshold
5	How do education-related indicators compare across countries with AI adoption levels?	Scatter plot	AI adoption vs. selected education indicator
6	What is the distribution of AI adoption levels across countries?	Histogram / grouped bar chart	AI adoption ranges/bins vs. country count
7	Which countries have shown the largest change in AI adoption between selected years?	Bar chart	Country vs. change in AI adoption
8	How do AI adoption patterns differ by region and year?	Heatmap	Region × Year with AI adoption measure
9	Which AI/education indicators contribute most to the overall comparison?	Bar chart	Indicator vs. selected aggregate/score
10	Can users interactively compare countries, regions and years in one report?	Interactive Tableau dashboard	Country/region/year filters + KPI cards + linked charts

4.2. Developing Visualizations

The supplied materials use maps, bar charts, line charts, heatmaps, scatter plots, KPI cards and comparison views. The suggested dashboard structure contains a Global Overview, Trends and Comparative Analysis views with interactive filters.

6. Report

6.1. Story Design File

The supplied Story design organizes the Tableau Story into six points: Global AI Adoption Overview, Regional Comparison, Country-Level Comparison, Adoption Trend Over Time, Education Indicator Relationship and Interactive Final Summary.

Story sequence

Story Point	Title / View	Purpose	Key Observation to Highlight
1	Global AI Adoption Overview	Introduce dataset, coverage and overall adoption level	Show overall KPI and geographic distribution without unsupported claims.
2	Regional Comparison	Compare AI adoption across regions.	Highlight visible differences using the selected measure.
3	Country-Level Comparison	Examine country-level variation.	Identify countries with higher or lower values in the selected year.
4	Adoption Trend Over Time	Show change across available years.	Describe the observed upward, downward or mixed trend.
5	Education Indicator Relationship	Compare adoption with a selected education indicator.	Describe the observed relationship; do not infer causation.
6	Interactive Final Summary	Bring main views together with filters.	Allow Year, Region and Country exploration.

SMARTBRIDGE

Story

Project Name	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	5 Marks

Story in Tableau

A Tableau Story presents a sequence of visualizations and dashboards so that viewers can move from a high-level overview to detailed comparisons and trends. For this project, the story is structured to explain global AI adoption in education in a clear, evidence-based sequence.

Story Sequence

Story Point	Title / View	Purpose	Key Observation to Highlight
1	Global AI Adoption Overview	Introduce the dataset, coverage and overall adoption level.	Show the overall KPI and geographic distribution without making unsupported claims.
2	Regional Comparison	Compare AI adoption across available regions.	Highlight visible differences between regions using the selected measure.
3	Country-Level Comparison	Examine country-level variation.	Identify countries with higher or lower values in the selected year.
4	Adoption Trend Over Time	Show how the measure changes across available years.	Describe the observed upward, downward or mixed trend.
5	Education Indicator Relationship	Compare AI adoption with a selected education indicator.	Describe the observed relationship; do not infer causation from correlation alone.
6	Interactive Final Summary	Bring the main views together with filters.	Allow users to explore Year, Region and Country and review the selected results.

Observations / Major Outcomes

- Global and regional differences in AI adoption can be compared using the map and ranking views.
- Time-series analysis can show whether AI adoption has changed across the available years.
- Country-level comparisons can identify variation within and between regions.
- The relationship visualization can be used to explore associations between AI adoption and selected education indicators.
- Interactive filters allow the viewer to change the year, region or country and inspect the corresponding dashboard results.

Activity 2: Publish Story on Tableau Public

7. Performance Testing

The final project template identifies utilization of data filters, number of calculation fields and number of visualizations as performance-testing/reporting items. The supplied activity files confirm interactive Year, Region and Country filters and multiple visualization types. Exact counts of calculation fields are not provided in the supplied documents and are therefore left unreported rather than guessed.

Item	Evidence from supplied project materials
Data filters	Year, Region and Country filters are specified where fields are available.
Calculation fields	Exact number not provided in the supplied files.
Visualizations	Maps, bar charts, line charts, heatmaps, scatter plots, KPI cards and comparison views are specified/used.

8. Conclusion / Observation

The project provides an interactive framework for analyzing global AI adoption in education. The dashboards support geographic comparison, country ranking, trend analysis and relationship exploration. The Story organizes these views into a progression from overview to detailed comparison and final interactive summary. The supplied materials also emphasize that correlations should not be interpreted as causation.

9. Future Scope

Future work can extend the project by completing the dataset-source metadata, adding further validated education indicators, expanding country and regional coverage, improving drill-down interactions, adding more time periods where available, and documenting the exact calculation fields and final performance metrics.

10. Appendix

10.1. Source Code (if any)

No source-code file is included in the supplied materials.

10.2. GitHub & Project Demo Link

GitHub repository is not included in the supplied materials. The project demo link is provided below along with the published Tableau links.
