

Business Questions and Visualization Report

Date	23 September 2026
Team ID	Individual / To be filled
Project Name	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	5 Marks

Visualization development refers to creating graphical representations of data to support understanding, analysis and decision-making. For this project, Tableau will be used to convert global AI-in-education data into interactive visualizations that make comparisons, patterns and trends easier to explore.

Business Questions and Visualization

The following business questions are designed around the project objective. Each question is paired with a suitable Tableau visualization. The exact fields and measures should be mapped to the final dataset used in the project.

Business Question	Visualization	Data / Fields Used
1. How does AI adoption in education vary across countries or regions?	Filled map / horizontal bar chart	Country or region; AI adoption measure
2. Which countries or regions show the highest and lowest AI adoption levels?	Sorted horizontal bar chart	Country/region vs. AI adoption score/rate
3. How has AI adoption in education changed over time?	Line chart	Year vs. AI adoption measure
4. Which regions have the greatest number of AI-in-education indicators meeting the selected threshold?	Bar chart	Region vs. count/percentage meeting threshold
5. How do education-related indicators compare across countries with different AI adoption levels?	Scatter plot	AI adoption vs. selected education indicator

Each visualization should be created in Tableau and a screenshot of the completed visualization can be inserted below the corresponding question in the final submission, if required by the SmartBridge template.

Business Questions and Visualization Report — Continued

Business Question	Visualization	Data / Fields Used
6. What is the distribution of AI adoption levels across countries?	Histogram / grouped bar chart	AI adoption ranges/bins vs. country count
7. Which countries have shown the largest change in AI adoption between available years?	Diverging bar chart	Country vs. change in AI adoption
8. How do AI adoption patterns differ by region and year?	Heatmap	Region × Year with AI adoption measure
9. Which AI/education indicators contribute most to the overall comparison?	Bar chart	Indicator vs. selected aggregate/score
10. Can users interactively compare countries, regions and years in one report?	Interactive Tableau dashboard	Filters for country/region/year + KPI cards + linked charts

Suggested Dashboard Structure

Dashboard 1 — Global Overview: KPI cards, global/region map and adoption ranking. Dashboard 2 — Trends: yearly AI adoption trend and year/region heatmap. Dashboard 3 — Comparative Analysis: country comparison, scatter plot and indicator analysis. Add interactive filters for Year, Country and Region where those fields exist in the dataset.

Important: No numerical findings have been invented in this report. The questions and visualization designs are project-ready; actual values and screenshots should come from the final dataset and Tableau workbook.
